Asian Development Review

Prema-chandra Athukorala
2012-12-01 The Asian Development Review is a professional journal for disseminating the results of economic and development research carried out by staff and resource persons of the Asian Development Bank (ADB). The Review seeks high-quality papers with relevance to policy issues and operational matters done in an empirically-

rigorous way. Articles are intended for readership among economists and social scientists in government, private sector, academia, and international organizations. This is the second issue to cover the proceedings of ADB's Forum on Capital Controls held on 14 July 2011, and assesses the experiences of selected Asian countries in using de jure capital controls.

Protein Aggregation and Fibrillogenesis in Cerebral and Systemic Amyloid Disease

J. Robin Harris 2012-12-09 This volume of the Subcellular Biochemistry series is the result of the long-standing research interest of the editor in the molecular mechanism underlying Alzheimer's disease and other amyloid diseases, indicated also by the earlier book in the series (Volume 38), devoted to Alzheimer's disease. The broad coverage within the present amyloidogenesis book represents an attempt to collate current knowledge relating to the proteins and peptides involved in most of the known amyloid diseases, together with some amyloid/fibril-forming proteins and peptides that are not involved in diseases. Thus, the range of topics included is comprehensive and furthermore it was thought appropriate to include both basic science and clinical presentation of

the subjects under discussion.

Bhaduri 2018-04-19 It is

beyond doubt that the interconnectedness between food, energy, water security and environmental sustainability exists and is getting amplified with increased globalization. It has been recognized that efforts to address only one part of a systemic problem by neglecting other inherently interlinked aspects may not lead to desirable and sustainable outcomes. In this perspective, policy- and decision- making requires a nexus approach that reduces trade-offs and builds synergies across sectors, and helps to reduce costs and increase benefits for humans and nature compared to independent approaches to the management of water, energy, food and the environment. In the past, work related to the Nexus

has looked at the interactions between water and food or water and energy, but there has been a reluctance to bring forward a broader systematic perspective that captures the multiple sectors and resource dependencies while understanding its cost to the environment if we neglect these linkages. This book is a compilation of thirteen papers published previously as a special issue of Water International, contains significant pieces of work on the W-E-F nexus focusing on relevant tools, solutions and governance at local and broader human scales.

Biocatalysis and Nanotechnology Peter Grunwald 2017-10-25 Nanobiocatalysis has rapidly developed into a subarea of enzyme biotechnology. It combines the advances in nanotechnology that have generated nanoscale materials of different sizes, shapes, and physicochemical properties, and the excellent characteristics of biocatalysts into an innovative technology. This book provides an overview of the various relations between nanotechnology and biocatalysis. It discusses the fabrication and application of nanomaterials for the immobilization of enzymes used in the sustainable

production of goods and chemicals. Nanosupports have several advantages compared with bulk solid materials because of their high surface area, which results in a significantly reduced mass transfer limitation and comparatively high enzyme loading. These characteristics are also of great use for applications in the fields of enzymatic biosensors, biofuel cells, bioelectronics, and photoelectrochemical analyte detection, where conductive nanomaterials improve the rate of electron transfer. The book also presents an overview of nanotoxicology and covers nanostructured enzyme catalysis in organic solvents and its potential application for biodiesel production, probing of enzymatic activity, and identification of enzyme functions of inorganic nanoparticles as enzyme mimics.

2012-02-27 This book constitutes the refereed proceedings of the International Conference on the Impact of Virtual, Remote and Real Logistic Labs, ImViReLL 2012, held in Bremen, Germany, in Februar/March 2012. The 16 revised full papers presented were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on fundamentals and historic background of lab-based research in logistics; infrastructure and design of virtual, remote and real labs; educational implications of virtual, remote and real labs; test-beds and demonstrators; lab-based process improvements in logistics; lab-supported product developments.

Labour Law and Social Protection in a Globalized World Jan Pichrt 2018-09-07
The protection of jobs and labour law standards

achieved by employees in the past has been under pressure from neoliberalization forces for many years. The focused perspectives evident in this original collection of essays go a long way toward clearly defining where labour law and social security law must set their sights in order to preserve fair and productive employer-employee relations in the new world of work. Distinguished researchers study the changing realities confronting the labour market, in public policy as well as in industrial relations. Issues and topics include the following: - integration of immigrants into industrial relations; - the social situation of migrant workers; - new phenomena brought by the digital age; - temporary agency work; - harmonizing family and working lives; - sport and labour law; - the role of European Works Councils; and - social and

labour reforms. Throughout this book, the contributors emphasize the changing role of the state and reform agendas. Although the central focus is on Europe, there is an abundance of comparative detail, allowing for global application. As a matchless, up-to-date overview and analysis of how new and emerging forms of employment and industrial relations impact employee security, this book will be warmly welcomed by practitioners, academics, and policymakers concerned with ensuring the persistence of fair and viable standards in labour and social security law.

treatment and the description of novel therapies for myeloma and other plasma cell neoplasms that have only very recently been licensed by the U.S. Food and Drug Administration. Examples include lenalidomide as first-line therapy, panobinostat in combination with bortezomib plus dexamethasone for relapsed/refractory myeloma, ibrutinib for Waldenström's macroglobulinemia, and new therapeutic regimens for systemic amyloidosis and POEMS syndrome. Information is also provided on drug combinations that have shown encouraging results and are very near to approval. Other important aspects covered in the book are the role of different imaging modalities in workup and the significance of newly acquired data relating to prognosis and minimal residual disease. Readers will find Multiple Myeloma and Other Plasma

Cell Neoplasms to be a rich source of knowledge that will be invaluable in improving patient management.

Epidemiology of Electromagnetic Fields

Martin Roosli 2014-06-03
Appeals to a Wide Audience
Fueled by more than 30 years of intensive research and debate on the impact of electromagnetic fields (EMF) on everyday life—starting with residential exposure to magnetic fields and the development of childhood cancer in the 70s and continuing with risk of exposure via wireless communications in present day—Epidemiology of Electromagnetic Fields addresses ongoing public and scientific controversy surrounding the possible effects of electromagnetic fields (EMF) to human health, and provides an in-depth introduction into the methodology of environmental epidemiology that is appropriate for all

levels, from student to practicing engineer. Exposure to EMF Focusing primarily on EMF examples, the author presents the general principles and methodological concepts in environmental epidemiology. Topics of importance in the first part of the book include epidemiological study designs, exposure assessment methods and implications for the study results, as well as selection bias, confounding, and other biases including reverse causality and ecological fallacy. The second part of the book covers environmental epidemiological methods in detail and outlines key examples such as childhood leukemia and exposure to extremely low-frequency magnetic fields, as well as examples that look at brain tumors and mobile phone use. The book also offers a detailed discussion on the range of EMF sources and exposures. In addition, it

highlights the sophisticated assessment methods required to address exposure situations, and provides a historical perspective. The third part of the book examines how EMF exposure from the use of wireless communication techniques and other challenges affect risk assessment today and also details future developments. Explores environmental epidemiological methods in detail, while critically discussing epidemiological findings Provides a state-of-the-art overview of the scientific evidence of the health effects of EMF Considers how novelty, the steep increase of radiofrequency (RF) EMF exposure from wireless communications, and other challenges affect risk assessment today Epidemiology of Electromagnetic Fields provides a thorough overview of the subject, and evaluates the scientific evidence surrounding the

possible health effects of EMFs.

Neokognitron und Hopfield Netz als künstliche neuronale Netze zur Mustererkennung: Theorie, computergestützte Simulation und Anwendungen Raoul Privenau 2012-03 Das menschliche Gehirn

empfängt eine Fülle unterschiedlicher Reize über verschiedene Sinnesorgane, wobei die visuelle Wahrnehmung in diesem Zusammenhang ein bedeutendes Gebiet darstellt. Der Mensch ist in der Lage aus einer großen Menge visueller Reize bestimmte Signale innerhalb kürzester Zeit herauszufiltern und richtig zu interpretieren. Probleme ergeben sich allerdings bei der Portierung der natürlichen Mustererkennung auf Computersysteme. Nach dem derzeitigen technischen Stand können Computer Daten zwar um ein Vielfaches schneller verarbeiten, als unser Gehirn, sind aber dennoch mit Mustererkennungsaufgaben überfordert, die das Gehirn in kürzester Zeit erfolgreich durchführt. Ein Ansatz zur Nachahmung des natürlichen Mustererkennungsprozesses sind künstliche neuronale

Netze als stark vereinfachte Modelle des Gehirns. Besonders das Neokognitron verspricht eine hohe Eignung zur Umsetzung dieser Aufgabe. Dieses Buch gibt zunächst eine Einführung in das Gebiet der Mustererkennung und vermittelt die notwendigen Grundlagen zu künstlichen neuronalen Netzen. Der Fokus liegt auf der strukturellen und funktionalen Darstellung des ursprünglichen Neokognitrons bei der Mustererkennung. Den dabei identifizierten Problemen begegnet man mit verschiedenen Erweiterungen, deren wesentliche Eigenschaften im Überblick dargestellt werden. Zur Veranschaulichung der praktischen Leistungsfähigkeit werden Anwendungen aufgezeigt, für die das Neokognitron implementiert wurde. Neben dem Neokognitron wird auch das binäre

Hopfield-Netz als klassisches künstliches neuronales Netz zur Mustererkennung erläutert. Entsprechend dieser Ausführungen wurde zusätzlich zum vorliegenden Buch ein E-Learning Modul für binäre Hopfield Netze prototypisch implementiert und wird hier vorgestellt. Beschreibung Aller Fische Conrad Gesner 2012-06 Dieses Buch von Conrad Gesner und Conrad Forer beinhaltet eine Auflistung aller zur Zeit seiner Entstehung bekannten Fische aus Meer, See und Fluss. Pflegeheime in der Einwanderungsgesellschaft

Bettina Schwarzer
2018-10-29 Bettina Schwarzer untersucht, wie soziale Dienste auf zunehmende Erwartungen nach einer kultursensiblen Ausgestaltung ihrer Angebote und Strukturen reagieren. Am Beispiel von Pflegeheimen zeigt sie auf, welchen Stellenwert Konzepte einer interkulturellen Öffnung in der Altenpflege besitzen und welche sozialen Beweggründe die Einrichtungen dazu antreiben, sich interkulturell weiterzuentwickeln. Dabei nimmt sie neben einer Organisations- ebenso eine

Feldperspektive auf das Untersuchungsgebiet ein. Auch dadurch kann die empirische Studie deutlich machen, dass neben demographischen Motiven, die Menschen mit Migrationshintergrund vermehrt zu potenziellen Klientinnen und Klienten sowie Mitarbeiterinnen und Mitarbeitern der Heime gemacht haben, insbesondere (menschenrechtliche) Gerechtigkeitsnormative (wie Chancengleichheit) und technisch-ökonomische Rationalisierungsüberlegungen (z.B. infolge des bestehenden Fachkräftemangels) als Triebkräfte dieser programmatischen Innovation wirken.

Play in the Early Years

Marilyn Fler 2017-05-01

The second edition of *Play in the Early Years* provides a comprehensive introduction to pedagogy and play in early years education settings. Drawing on classical and

contemporary theories, this text examines social, cultural and institutional approaches to play, and explores a range of strategies for successfully integrating play into classrooms. Thoroughly revised to include the latest methods and research, this edition features new material on intentional teaching, play as learning, digital play, and discipline-specific content. Two new chapters discuss post-structuralist and cultural-historical conceptions of play, and extended practical examples link pedagogical practice to the Early Years Learning Framework (EYLF) and the Australian Curriculum. The text is pedagogically rich, and each chapter is supported by a comprehensive companion website which provides links to videos, readings and supplementary activities. New Asian Approaches to

Africa: Rivalries and Collaborations Takuo

Iwata 2020-03-03 The 21st

century has seen an increase in the presence and influence of Asian governments, firms and other stake-holders in Africa. With the changing times, changes in approaches to Africa by four major Asian countries (China, India, Japan and South Korea) have taken place. By tracing the history between these Asian countries and African countries, this collection reflects on the “new” phases of Asian Approaches to Africa. Composed by authors who are not only experienced expert scholars of African Studies, but also prominent specialists on African policies of Asian countries, this collection focuses on the official development assistance (ODA) as well as other crucial issues and actors such as business, civil society, and media to explore the new Asian

approaches to Africa in a comprehensive manner. Organised into three sections, this collection explores the experiences of the “forums” (conferences, or summits) for Africa’s development hosted by four major Asian countries, reflects on Asian cultural influence in Africa, and highlights new phases of Asian approaches to Africa. This book looks to the future collaboration of Asian actors/ partners working in/ with Africa, rather than exaggerating rivalries and disputes in order to grasp the potentialities and challenges in the relationship between the two regions; an emerging and ongoing agenda that we will encounter further in the coming years. This book will be of interest to students, researchers and professors in universities, as well as research institutes on Asian and African Studies. It will also be of value to journalists, and government officials; particularly

diplomats.

2013-03-22 This article is an analytical report of the economic developments of Costa Rica. The economy showed rapid growth in the aftermath of the global crisis with low inflation; but for further stable growth, certain policy frameworks and reforms need to be reinforced. The fiscal stance should be made tighter to mitigate risks of inflation and external imbalances. Interest rates and exchange rates must be increased, and monetary policy should be tightened for price stability. The Executive Board welcomes these measures for structural potential growth.

Dirty Electricity Samuel Milham, MD, MPH
2012-12-06 When Thomas Edison began wiring New York City with a direct current electricity distribution system in the 1880s, he gave humankind

the magic of electric light, heat, and power; in the process, though, he inadvertently opened a Pandora's Box of unimaginable illness and death. *Dirty Electricity* tells the story of Dr. Samuel Milham, the scientist who first alerted the world about the frightening link between occupational exposure to electromagnetic fields and human disease. Milham takes readers through his early years and education, following the twisting path that led to his discovery that most of the twentieth century diseases of civilization, including cancer, cardiovascular disease, diabetes, and suicide, are caused by electromagnetic field exposure. In the second edition, he explains how electrical exposure does its damage, and how electricity is causing our current epidemics of asthma, diabetes and obesity. Dr. Milham warns that because of the recent proliferation of

radio frequency radiation from cell phones and towers, terrestrial antennas, Wi-Fi and Wi-max systems, broadband internet over power lines, and personal electronic equipment, we may be facing a looming epidemic of morbidity and mortality. In *Dirty Electricity*, he reveals the steps we must take, personally and as a society, to coexist with this marvelous but dangerous technology.

The book reflects the significant research advances achieved in this field during the past few years, which have enhanced our understanding of the molecular mechanisms responsible for the pathogenesis of plasma cell dyscrasias.

The Notion of Award in International Commercial Arbitration Giacomo Marchisio 2016-04-24
International commercial arbitration relies extensively on the

possibility of enforcing arbitral decisions against recalcitrant parties. Because courts and arbitration laws across the world take contrasting approaches to the definition of awards, such enforcement can be problematic, especially in the context of awards by consent, and the recent development known as 'emergency arbitration'. In this timely and groundbreaking book, a young arbitration scholar takes us through the difficulties of defining the notion of arbitral award with a rare combination of theoretical awareness and attention to the procedural requirements of arbitral practice. In a framework using a comparative analysis of common law and civil law jurisdictions (specifically, England and France) and how each has regulated in different ways the equilibria between state justice and arbitral justice - and comparing each with

the UNCITRAL Model Law – the book addresses such issues as the following: - the ‘judicialization’ of arbitration; - different models of arbitral adjudication and their impact on the notion of award; - what an award needs to contain to be enforceable; - awards on competence; - awards by consent; and - awards ante causam. The author employs a methodology that views arbitration as providing an institution for administering justice rather than as a purely contractual creature. To this end, rules of arbitral institutions (particularly the International Chamber of Commerce) are examined closely for their implications on what an award means. As a fresh look at the arbitral award by placing it in a broader context than is usually found, this book allows for a greater understanding of the functioning of international commercial arbitration. It is

sure to become an international reference, and as such will be welcomed by arbitrators, practitioners at global law firms, companies doing transnational business, interested academics, and international arbitration centres in emerging markets.

postcrisis income gap remains larger by comparison to more advanced regional economies. Structural bottlenecks continue to undermine overall competitiveness and constrain growth potential. *Teaching Secondary Mathematics as if the Planet Matters* Alf Coles 2013-07-18 'This book moves us beyond a theoretical pondering of the issues and makes concrete suggestions for teachers and students for how things can be different in mathematics classrooms. This is long overdue.' Peter Gates, University of Nottingham *Teaching Mathematics as if the Planet Matters* explores how Mathematics teachers can develop approaches to curriculum and learning which help students understand the nature of the contemporary world. It sets out a model for teaching and learning that allows teachers to examine

existing approaches to teaching and draw upon the insights of mathematics as a discipline to help students relate classroom mathematics to global issues such as climate change, the economy, food supplies, biodiversity, human rights, and social justice. Including practical examples, suggestions for teaching activities and detailed further reading sections, the book covers: the mathematics of description in the measuring, recording and statistical analysis that informs our knowledge of climate change, consumption and sustainability; the mathematics of prediction in the modelling used by governments, scientists and businesses to plan roads, power stations and food supplies and their effects; the mathematics of communication in the news reports, blogs and environmental campaigns, incomplete without graphs,

charts and statistics. The true worth of a school subject is revealed in how far it can account for and respond to the major issues of the time. The issue of the environment cuts across subject boundaries and

requires an interdisciplinary response. Mathematics teachers are part of that response and they have a crucial role in helping students to respond to environmental issues and representations.
