High-speed Video Observation and On-line Measurements of Oil Aeration in an Internal Combustion Engine Devon L. Manz 2005 (Cont.) Aeration measurements reveal a general increase in aeration as a function of engine speed at all locations in the oil sump. In the oil sump, more air is present at the oil surface than at the oil pick-up because air continuously leaves the oil at the air-oil interface. When the engine shuts down, all of the oil in the lube path drains back into the oil sump, and in a short period of time all of the air bubbles rise to the surface and escape the oil. It is the balance between air entering the oil (creation mechanisms) and air leaving the oil (destruction mechanisms) that is the focus of this study.

Shakespeare, The Movie II Richard Burt 2004-02-24 Following on from the phenomenally successful Shakespeare, The Movie, this volume brings together an invaluable new collection of essays on cinematic Shakespeares in the 1990s and beyond. Shakespeare, The Movie II: *focuses for the first time on the impact of postcolonialism, globalization and digital film on recent adaptations of Shakespeare; *takes in not only American and British films but also adaptations of Shakespeare in Europe and in the Asian diapora; *explores a wide range of film, television, video and DVD adaptations from Almereyda's Hamlet to animated tales, via Baz Luhrmann, Kenneth Branagh, and 1990s' Macbeths, to name but a few; *offers fresh insight into the issues surrounding Shakespeare on film, such as the interplay between originals and adaptations, the appropriations of popular culture, the question of spectatorship, and the impact of popularization on the canonical status of "the Bard." Combining three key essays from the earlier collection with exciting new work from leading contributors, Shakespeare, The Movie II offers sixteen fascinating essays. It is quite simply a must-read for any student of Shakespeare, film, media or cultural studies.

Review of Progress in Quantitative Nondestructive Evaluation Donald O. Thompson 2012-12-06 The objective of this study was to increase the understanding of damage in composite materials with through-the-thickness reinforcements. As a first step it was necessary to develop new ultrasonic imaging technology to better assess internal damage of the composite. A useful ultrasonic imaging technique has been successfully developed to assess the internal damage of composite panels. The ultrasonic technique accurately determines the size of the internal damage. It was found that the ultrasonic imaging technique was better able to assess the damage in a composite panel with through-the-thickness reinforcements than by destructively sectioning the specimen and visual inspection under a microscope. Microscopic determination of crack location and lengths in a composite panel with through-the-thickness reinforcements was almost impossible. Five composite compression-after-impact panels were tested. The compression-after-impact strength of the panels with the through-the thickness reinforcements was almost twice that of the comparable panel without through-the-thickness reinforcement. #NAME? Ernest Cashmore 1994-01-01 Why all the fuss over television? It is blamed for an assortment of evils, including violence, shortened attention spans, the decline of literacy and political indoctrination. In this scintillating and approachable book, Ellis Cashmore weighs up the theories and the evidence. He argues that much of the panic is without foundation and that the single most important danger posed by tv is that it encourages us to spend too much. Cashmore agrees with many writers that television is an elemental force in today's culture, but he offers us a completely different account of how and why this has come about. It is an evaluation that will surprise, provoke and delight. In essence, Cashmore argues that television is the central apparatus of consumer society and its success is measured not in terms of whether we enjoy programs, but how much we spend as a result of watching them. It is a book that should be read by anyone who watches television and wants to know what it is doing to them.
