Winners are Driven Bobby Unser 2004-05-03 One of the legends of auto racing shares his secrets for living a good life and achieving business success, applying his winning formula on the racetrack to the fierce competition and high-speed turns of modern life. 75,000 first printing. \$100,000 ad/promo.

Motor Vehicle T. K. Garrett 2000-12-18 "As a reference book it has to be classed as one of the best! There should be a copy of it in every college library." Association of Motor Vehicle Teachers' Newsletter The Motor Vehicle has been an essential reference work for both the student and practising engineer ever since the first edition appeared in 1929. Today it is as indispensable to anyone with a serious interest in vehicle design techniques, systems and construction as it was then. The current edition has undergone a major revision to include seven new chapters. These include Electric Propulsion; covering all aspects from lead acid and alternative batteries to fuel cells and hybrid vehicles, Static and Dynamic Safety, and Wheels and Tyres. The chapter on the compression ignition engine has been expanded to form three chapters, concentrating on aspects such as common rail injection, recently developed distributor type pumps and electronic control of injection. Automatic, semi-automatic and continuously variable ratio transmissions are covered in two new chapters. A third contains information on the latest developments in computer-aided control over both braking and traction, for improving vehicle stability, while another contains entirely new information on the practice and principles of electrically-actuated power-assisted steering. Also included is coverage of material detailing the latest knowledge and practice relating to safety systems, vehicle integrity, braking systems and much more. The established layout of the book is retained, with topics relating to the Engine, Transmission and Carriage Unit dealt with in turn. Each chapter is well-provided with diagrams, sections, schematics and photographs, all of which contribute to a clear and concise exposition of the material under discussion. Latest extensive revisions to a well-established title New chapters on electric propulsion and vehicle safety.

A Life in Car Design Oliver Winterbottom 2017-03-17 This book gives a unique insight into design and project work for a number of companies in the motor industry. It is aimed at both automobile enthusiasts and to encourage upcoming generations to consider a career in the creative field. Written in historical order, it traces the changes in the car design process over nearly 50 years.

Aluminum in America Quentin R. Skrabec 2017-02-06 The history of aluminum: metallurgy, engineering, global business and politics—and the advance of civilization itself. The earth's most abundant metal, aluminum remained largely inaccessible until after the Industrial Revolution. A precious commodity in 1850s, it later became a strategic resource: while steel won World War I, aluminum won World War II. A generation later, it would make space travel possible and the 1972 Pioneer spacecraft would carry a message from mankind to extraterrestrial life, engraved on an aluminum plate. Today aluminum, along with oil, is the natural resource driving geopolitics, and China has taken the lead in manufacture.

The Coventry Motor Industry David Thoms 2017-11-01 This title was first published in 2000: Coventry is synonymous with both the creation and relative decline of the British motor car industry. This volume utilises the extensive range of primary sources on the subject to explore the relationship between the car industry in its local context and the wider economic, social and political environment. It analyses the emergence and early dominance of Coventry's motor manufacturers, the rise of volume production in the 1930s and the instabilities and renaissance of the post-war era. Specific chapters deal with the industry's response to the demands created by the two world wars. A number of themes run throughout the book including the structure of the industry and the relationship between its various sectors, resource provision, management and labour relations, and the nature and response to market demand. The book also provides fascinating insights into the history of some of the most evocative marques in the car industry, including Daimler, Jaguar, Alvis, Siddeley, Standard and Rover.

Connie Ann Kirk 2017-12-18 The number of athletes who have died competing in the sport of motor racing, including amateurs and professionals around the world, stretches into the thousands. Despite the danger, drivers continue to compete day in and day out for the thrill and joy of the race. In *Taken by Speed: Fallen Heroes of Motor Sport and Their Legacies*, Connie Ann Kirk pays tribute to professional racing drivers who died while competing in the sport they loved. Covering tragedies from 1955 to the present, Kirk carefully reflects on the legacies of the racers and the impact of the tragic events, including on safety regulations, innovations, and on society as a whole. Drivers and incidents covered in this book include the 24 Heures du Mans race of 1955 where over 80 people died; the 1964 crash at the Indianapolis 500 that stopped the race for the first time in history; and the tragic losses of racers Ayrton Senna, Dale Earnhardt, Alberto Ascari, Jim Clark, Bruce McLaren, Gilles Villeneuve, Francois Cevert, Dan Wheldon, Justin Wilson, and Jules Bianchi. Taken by Speed features exclusive interviews with legends of motor sport—Mario Andretti, Derek Bell, Sir Stirling Moss, Bobby Rahal, Brian Redman, and Sir Jackie Stewart—who raced in the sport's most dangerous era. It also includes timelines of safety improvements in the sport and key moments in motor sport history. Using motor sports as its lens, this book explores moving stories of what it means to pursue a life's passion with unwavering drive, commitment, and courage.
