The Kawasaki Triples Bible Alastair Walker 2011-01-15 The Kawasaki Triples Bible covers the entire production of three cylinder two-strokes from 1967 to 1980, featuring a year by year breakdown of bike specs, including the KH250, 350 S2, KH400, H1 500 and H2 750 models. Illustrated with hundreds of archive photographs and period adverts, plus personal memories from some of the racers and tuners who got the best from the fearsome H1 500 and H2 750 machines of the 60s and 70s, this is an invaluable resource for any collector or restorer of these fabulous motorcyCcles. With information provided by Kawasaki Museum, acknowledged experts such as Rick Brett and Dave Marsden, and lifelong Kawasaki triples owners, it defines the enduring appeal of the models. It also contains excellent tips on spares, tuning, rebuilds etc., and captures the very essence of what made the Kawasaki triples the most rebellious, kick-ass two-strokes of their time.

The Setting of the Rising Sun Terry C. Treadwell 2010-12-15 The first complete history of Japanese military aviation from its beginnings until 1945.

Asian Front Ian Slater 2020-08-10 **On the Asian Front** At Manzhouli, near the border of China, Siberia, and Mongolia, the Chinese launch their charge into the woods. There is a roar of fire—AK-47s, AK-74s, 7.62mm bayonet-equipped type 56 Chinese carbines, type 43 and 50 7.62mm ChiCom submachine guns—and, from the other side, the eruption of the SAS/D’s Heckler & Koch 9mm Parabellums firing at over eight hundred rounds a minute, the crash of grenades, and the terrible whistling of flak chettes. Over the Hindu Kush, four ChiCom fighters, Shenyang J-6Cs, with swept-back wings and armed with air-to-air missiles and deadly NR-30mm cannons, swoop down from 36,000 feet at Mach 1.3 toward Allied B-52s. Suddenly the sky is aglow with phosphorous flares like shooting stars, as the ChiComs’ four 120-pound Soviet-type Aphd missiles streak toward the B-52s at 2,800 meters per second..IT’S ALL-OUT WAR

Corporation Report ...: Kawasaki Aircraft Industries Company, Airframes and Engines United States Strategic Bombing Survey 1947

B-24 Liberator vs Ki-43 Oscar Edward M. Young 2012-04-20 In reviewing reports of air combat from Spain, China and the early stages of the war in Europe, the US Army Air Corps called for heavier armor and armament for its bomber fleet, including the addition of a tail turret. While Japan tried to counter with their own heavy fighters, their inability to produce them in any number meant that they were forced to face the bomber threat with the nimble, but under-armed Ki-43 “Oscar”. While severely outgunned, the Japanese learned to use their greater maneuverability to exploit the small weakness in bomber defenses. This book tells the story of the clash in the skies over the Pacific, as the Japanese fought desperately against the coming tide of the American bomber offensive.

Japanese Army Fighter Aces Ikuhiko Hata 2012-04-05 In-depth review of Imperial Japanese Army Air Force fighter units and pilots Detailed study of equipment (e.g., the Zero fighter), operations from Pearl Harbor to kamikaze attacks, and pilots who achieved ace status Heavily illustrated with photos of pilots, aircraft, and unit insignia

Motorized Obsessions Paul R. Josephson 2007-08-22 From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America’s most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners’ clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson’s compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habita.

Peter Henshaw 2012-10-01 A fascinating and complex piece of machinery, the modern motorcyCcle is easily as complex as the modern car. Clear, jargon-free text, and detailed cutaway illustrations show exactly how the modern bike works. From the basics of the internal combustion engine, to the wide variety of modern transmissions and ancillary systems.

John Deere Snowmobiles Ronald K. Leonard 2014-01-23 Long respected as a manufacturer of sturdy agricultural machinery, the John Deere Company began in the 1960s to build a line of consumer products in a dedicated factory in Horicon, Wisconsin. Starting with a lawn and garden tractor in 1963, Deere soon entered the fast-growing snowmobile market, introducing two models in 1971. The next 13 years would see a succession of models as Deere vied against tough competitors in a weather-dependent market. This detailed history, written by two key participants in the snowmobile program, describes the development of John Deere snowmobiles from start to finish: the design and engineering decisions that shaped each important model; reception of the snowmobiles by consumers; the factory race teams; the introduction of front-engine and water-cooled models; the process of selecting engines and negotiating with suppliers, including when problems developed; and the snowmobiles’ impact on product engineering. The text provides an inside view of Deere’s Consumer Products Division at a time of rapid growth, and of the people and processes that made it all happen.

Ki-61 and Ki-100 Aces Nicholas Millman 2015-11-20 This is the story of the elite Japanese Army Air Force (JAAF) aces that flew the Kawasaki Ki-61 Hien (Swallow), and the Ki-100 Goshikisen in the Pacific Theatre of World War 2. The former, codenamed “Tony” by the allies, was a technically excellent aircraft, possessing power, stability and a good rate of climb - differing radically from the usual Japanese philosophy of building light, ultra-maneuverable fighters. Its pilots soon realised, however, that the type was plagued by a number of dangerous mechanical issues. Then as the war moved relentlessly closer to Japan’s doorstep, a desperate, expedient innovation to the Ki-61 airframe by fitting it with a radial instead of inline engine resulted in one of the finest fighters of World War 2 - the Ki-100. This book uses the latest findings to provide a gripping account of some of the most remarkable and hard-pressed fighter pilots of the war. It reveals how these men, unlike so many of their unfortunate late-war colleagues, could surprise Allied aircraft in high-performance fighters and claim successes in the face of enormous odds.
