The school leader in the 21st century is increasingly perceived as an instructional leader expected to implement whole-school reform models that can shape teacher practice and influence student outcomes. The significant changes in role expectations for school leaders present considerable challenges to an educational system that was not designed to incorporate these conceptualizations. In light of the increased acceptance of changed leadership expectations, the elements that are needed for developing, supporting, and sustaining instructional leaders who can lead systemic change efforts are frequently not present, are fragmented, or are observed at various developmental stages throughout the PK-20 pipeline. This book is centered on the learning and changed behaviors of school leaders, who engaged in a sustained job-embedded professional learning community, facilitated through a university-district partnership. The learning from the findings, suggested that job-embedded learning with their peers, can be instrumental for these principals to build the capacity to lead systemic change efforts. The findings further suggested that creating conditions for new understanding to occur, and sustained opportunities to apply new learning in context to their role, entailed a collaborative effort by a partnership involving two separate institutions with different priorities. The author makes a case for the educational pipeline, to prioritize the support and understanding of complex systemic change efforts and innovations, as they are linked to school improvement.

McKay-Semmler 2021-12-16 Case method teaching has long been recognized for its educational value. In classes, workshops, and seminars where case studies are used effectively, discussion participants gain knowledge and become more proficient in analyzing information. Case learning also increases tolerance for ambiguity and fosters deeper understanding of complicated issues. Beyond basic-level memorization of concepts and definitions, case learning encourages participants to engage in perspective-taking while analyzing and evaluating the communication behaviors of characters. Case learning promotes exploration of complex problems in ways that are creative, interactive, and engaging for both case learners and case facilitators. This book is a compilation of original case studies on topics spanning intercultural communication, organizational communication, and conflict resolution. Core concepts in conflict studies, such as shared interests, conflict styles, and power currencies, are narratively presented in dynamic interplay, and discussion participants are compelled to think critically about their implications. Moreover, abstract concepts and policies pertinent to intercultural relations, like intercultural communication competence and affirmative action policies, are presented in the form of concrete characters in situated realities, encouraging case learners to consider the particulars (people), as well as the principles (ethics and laws). For the case learner, the highest level of thinking is required: core concepts must be learned, synthesized, applied, and critically examined in discussing the case.

Sustainability Challenges and Solutions at the Base of the Pyramid Prabhu Kandachar 2017-09-08 Around the turn of the millennium it had become painfully evident that development aid, charity or "global business-as-usual" were not going to be the mechanisms to alleviate global poverty. Today, there is little dispute that poverty remains the most pressing global problem calling for innovative solutions. One recent strategy is the Base of the Pyramid (BoP) concept developed by Prahalad and Hart, which relies on entrepreneurial activity tapping into the previously ignored markets of the economically most disadvantaged. It is a process requiring innovations in several disciplines: technological, social and business. This book covers a number of areas. First, much of the current BoP discussion emphasises targeting products to the needs of the poor. But do we actually know what the real needs of the poor are? This book takes a bottom-up human-centred approach and examines examples that truly engage the poor in BoP product and service development. What types of needs assessment methodologies are indicated considering the cultural differences in BoP countries? Are the existing methodologies adequate? Do they need to be redefined and redeveloped? Second, the book considers how we can balance poverty alleviation and stimulate economic growth without stressing the ecosystem. Tragically, the poor are hardest hit by the adverse effects of environmental deterioration such as water shortages, climate change or the destruction of habitats. While the economic welfare of the poor is critical, the BoP approach must balance its inherent paradox of encouraging greater consumption while avoiding further pressures on environmental sustainability. The link between the BoP approach and sustainable development is a key feature of this book. Third, it looks at innovation and asks what kinds of "bottom-up" innovation (open source, technological, social and business) support BoP initiatives (and

sustainable development)? Fourth, the book deals with the relationship between development assistance and BoP. Is a BoP strategy the antithesis to development aid or can these two co-exist or even complement each other? Finally, the book raises questions about the relationship between corporate responsibility and BoP. Is BoP a new form of corporate neo-colonialism or a new form of corporate responsibility? Although the BoP concept has unleashed an extensive and generally enthusiastic response from academics, businesses, NGOs and governments, the knowledge domain around this concept is still in the early stages of development. This book addresses that need with a focus on the needs of the end-users – the poor – as a starting point for BoP products and innovations. With contributions from both supporters and critics, it provides a treasure trove of global knowledge on how the concept has developed, what its successes and failures have been and what promise it holds as a long-term strategy for alleviating poverty and tackling global sustainability.
